Yes sure, We just finished calculating it.

Davidson segments flowing in the OAW totaled 614 ft long.

Best,

Mead

Hi again Mead,

Do you have the wetted channel length along the OAW reach at the spring above I-10 that you could share with me?

Thanks again,

Rob

**Subject:** report for EPA- flows in Davidson Canyon

Dear Rob,

Linked below are several summaries from March 2016 regarding our findings from PAG's Wet/Dry mapping of Davidson Canyon. This includes photos and maps of the base flows.

<https://www.dropbox.com/sh/jzfkudsio8c5jd7/AACUaonXwRGwNT7qI0UZm8H6a?dl=0>

We saw quite a bit of clear base flow in Davidson Canyon in the last few weeks both near the confluence of Cienega of and further upstream by the bridge south of the I-10. We did not have any sightings of fish or frogs in Davidson Canyon.

Hope you can join us on a future mapping trip !

Best,

Mead

Thank you Julia and Mead. One of these days I will fly down for the wet-dry mapping!

Best,

Rob

Hi, Mead, would you provide any information you might have from the upcoming March 18, 2016 walk-through, when available, to Dr. Leidy and copy me?

Hi Julia,

Hope you are well. Given the relatively wet year beginning last monsoon season, I am curious about what flows currently look like in Davidson Canyon, especially in the OAW reach upstream from I-10 near the spring. Has anyone walked that recently? If so, have any frogs or fish been observed?

Best,

Rob
